Exp: 15 Analyze types of Servers

10/10/2026

AIM:

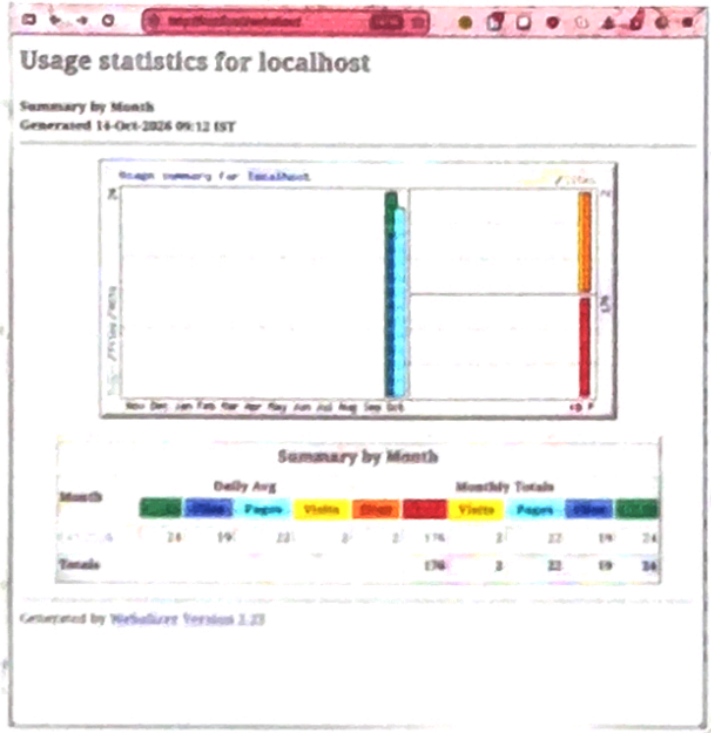

To install, configure and use the Webalizer tool to analyze web server log files.

PROCEDURE:

1. Install Apache Web server & webalizer on Ubuntu linux.
2. Start the Apache service & open the website in a browser.
3. Check the Apache access log file for recorded requests.
4. Configure webalizer to read the web server log file.
5. Run Webalizer to generate report in a web browser.
6. Analyze hits, visitors, page views, browsers, operating systems and HTTP status codes.
7. Record the observations and results.

RESULT:

Thus, the Analyses of different networks has been successfully implemented.

Usage statistics for localhost
